The Anything Group Presents Riker And Its Connected Technology Ecosystem At HITEC 2026

SAN ANTONIO TEXAS, May 14, 2026 - The Anything Group (TAG) will present its collaborative software ecosystem at HITEC 2026, where hospitality and technology professionals gather to explore systems shaping the future of hospitality and experience-driven commerce.

At HITEC, TAG will present its collaborative software ecosystem, designed to support bookings, payments, and data intelligence across hospitality environments where operational reliability is critical.

This ecosystem includes:

- **ALBIE**, TAG's booking infrastructure platform, supporting reservations and availability across service-driven businesses.
- **RIKER**, TAG's payment infrastructure platform, designed to support reservation payments, deposits, ticketing, and high-volume service environments with reliability and operational clarity.
- **Tagalitics**, TAG's analytics platform, providing centralized visibility across operational and marketing data to support informed decision-making.

As the most recent addition to TAG's ecosystem, RIKER represents a new layer of payment infrastructure built specifically for hospitality and experience-driven commerce, reinforcing how bookings, payments, and data work together as connected systems.

Together, these platforms operate as infrastructure, supporting continuity behind the scenes so service remains uninterrupted on the floor.

TAG will be exhibiting at **Booth #3221**, where attendees can learn more about its connected commerce ecosystem.
